

one:cx⁷

**Built for complexity.
Designed for clarity.**

One intelligent platform for integration, transparency and speed - ready to scale with your ambition.

tracetronic

It's **time** to think bigger

one:cx is the integrated platform for modern software development – from the first requirement to the rollout of a new feature. It unites teams, tools, data, and processes in a single shared environment, leaving behind fragmented toolchains, disconnected silos, and manual handoffs.

With automated workflows, end-to-end traceability, enterprise-grade security, and cloud-native scalability, **one:cx** accelerates integration and validation, stabilizes releases, and shortens development cycles.

one:cx stands for a new way of developing software: turning complex software projects into a transparent, agile, and data-driven engine for innovation.

Real value

Higher test throughput

Flexible scaling, parallelization, and on-demand test resources keep pace with your needs.

Shorter Release Cycles

Fast feedback, tighter iterations, and continuous integration and validation accelerate every release.

not just on
paper

Better Decisions

Live status, transparent quality metrics, meaningful reports, and early detection of critical deviations – so you always know where you stand.

Smoother Workflows

Seamless integration, fewer manual handoffs, and consistent processes across tools, teams, and locations.

Less manual work

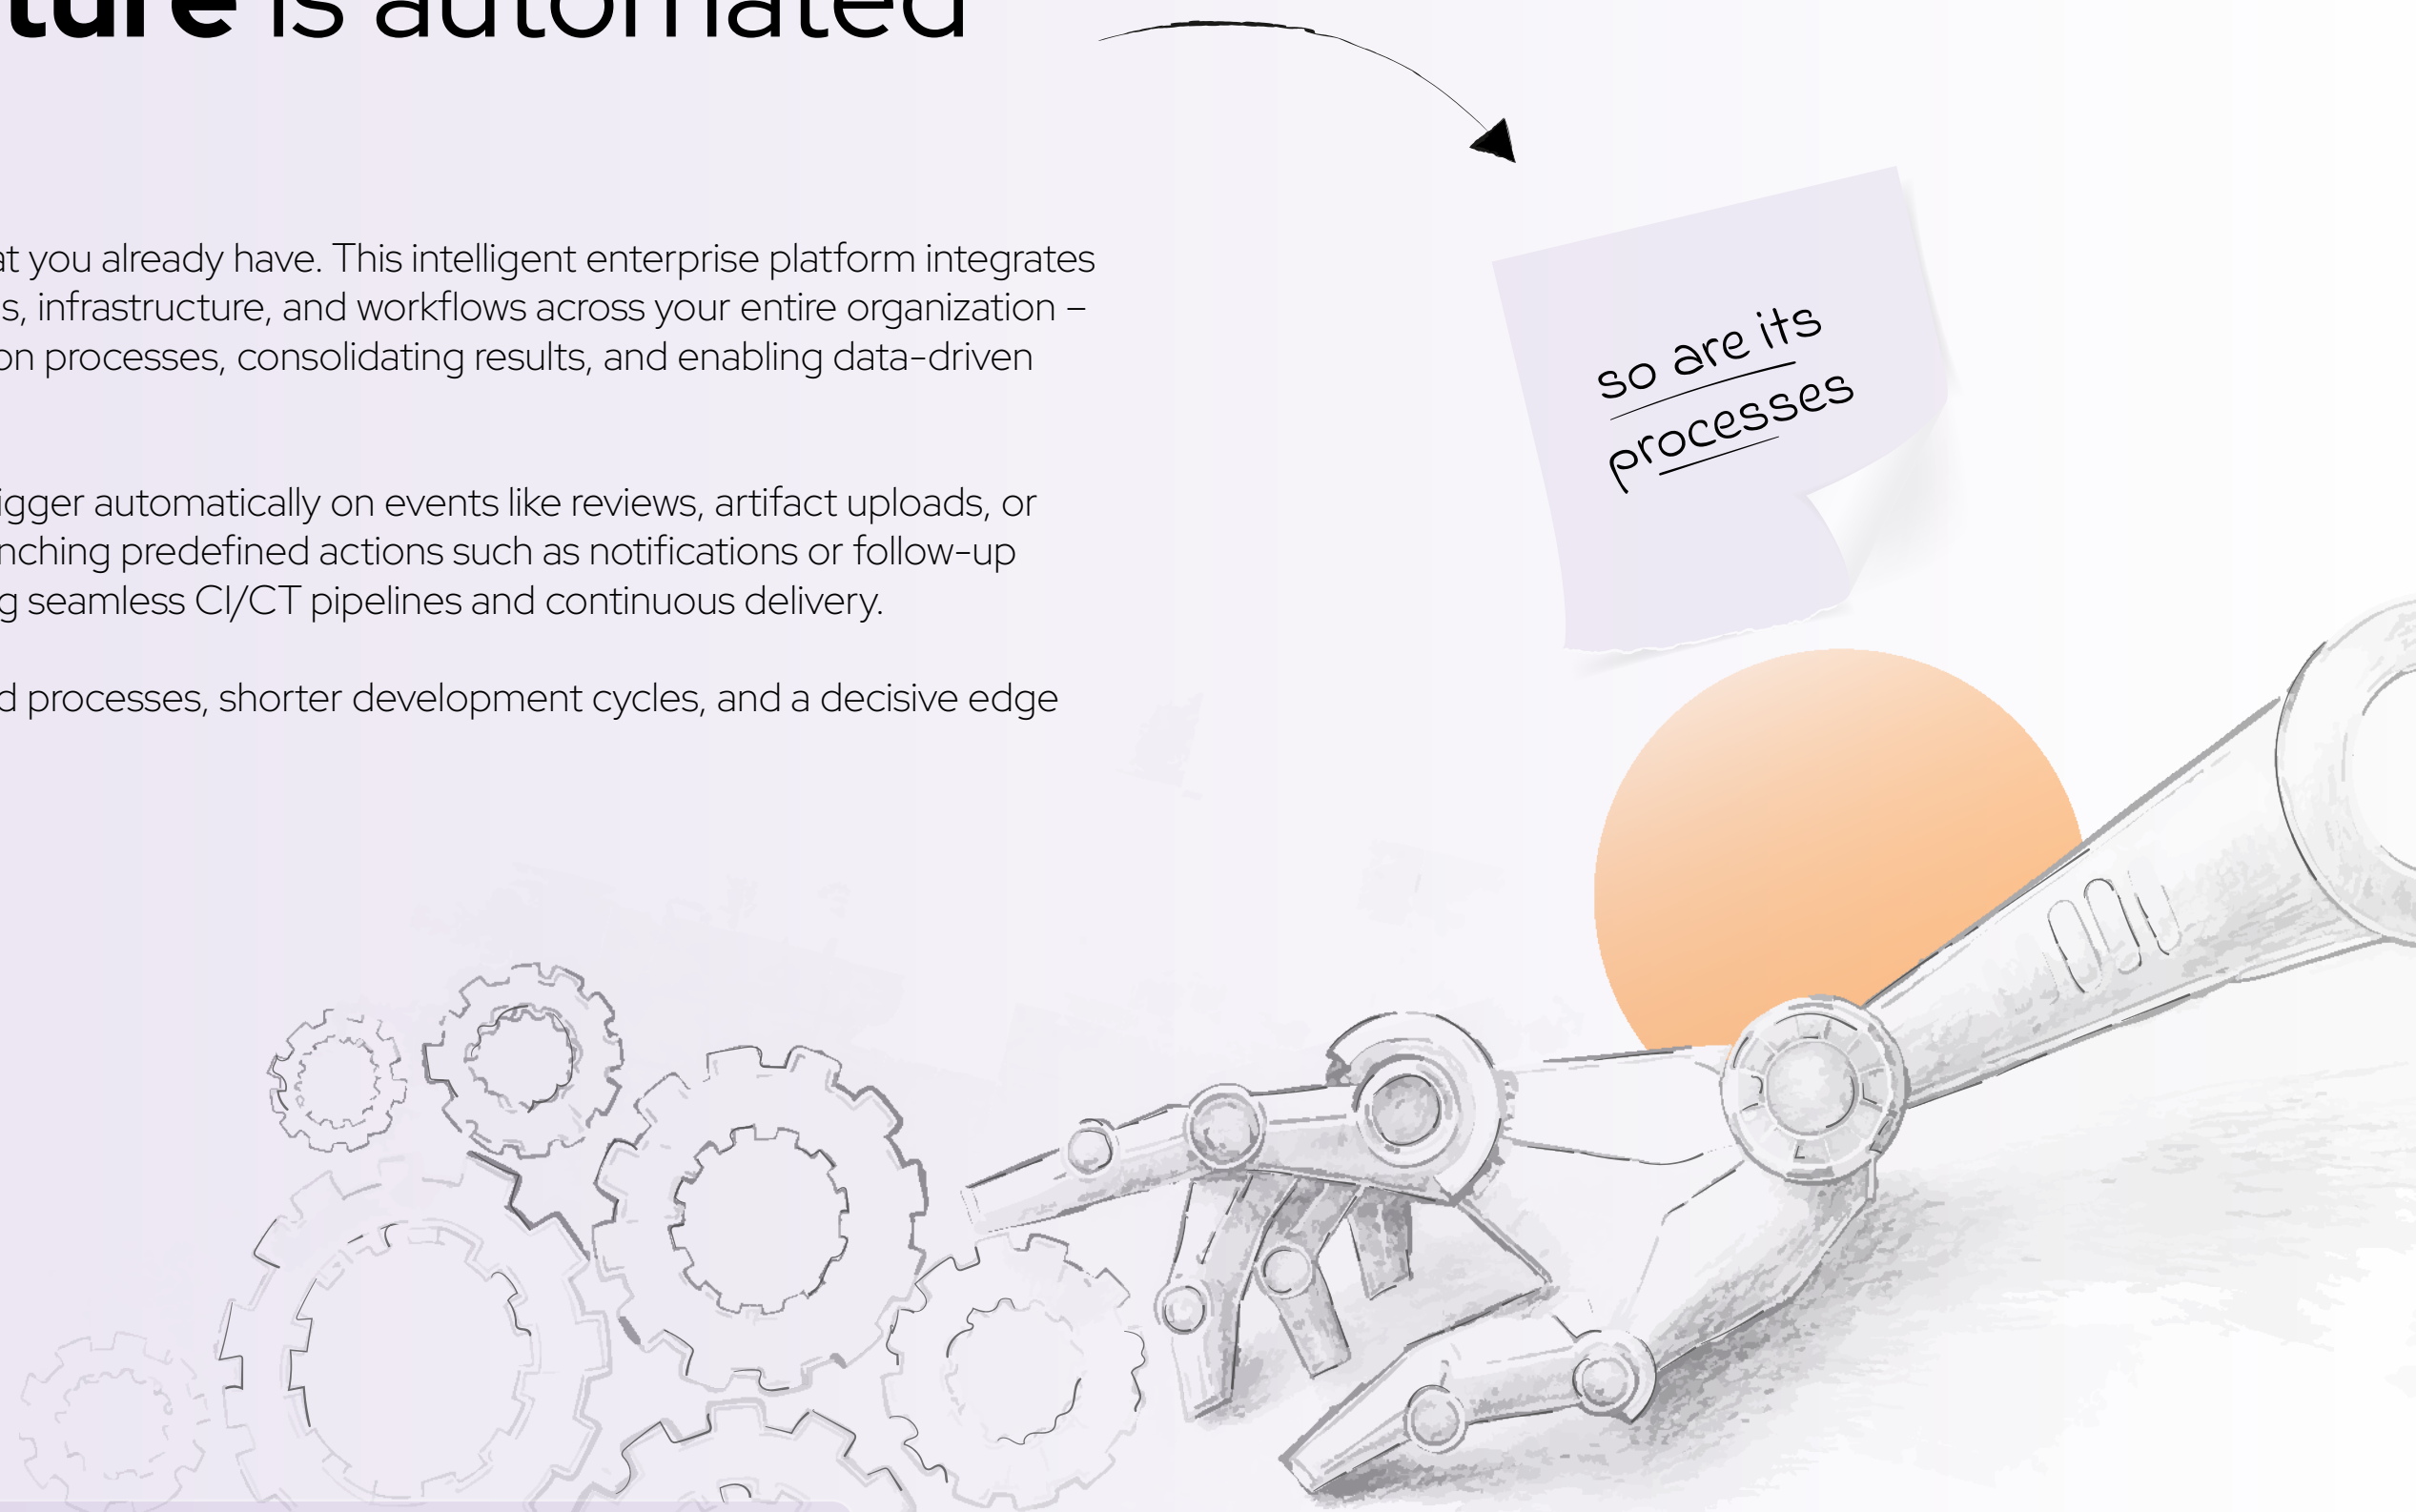

Intelligent automation and AI-powered services take care of repetitive tasks.

The **future** is automated

one:cx builds on what you already have. This intelligent enterprise platform integrates existing tools, systems, infrastructure, and workflows across your entire organization – orchestrating validation processes, consolidating results, and enabling data-driven release decisions.

Modular workflows trigger automatically on events like reviews, artifact uploads, or coverage checks, launching predefined actions such as notifications or follow-up processes – powering seamless CI/CT pipelines and continuous delivery.

The result: automated processes, shorter development cycles, and a decisive edge in time to market.

so are its
processes

- **Flexible Integration Endpoints** – standardized, extensible, future-proof
- **Centralized orchestration** – one control point for every system
- **No tool migration required** – protect your existing investments
- **End-to-end CI/CT pipelines** – from requirement to release
- **Quality Gates & Flows** – automated control and release decisions

The **AI multiplier** effect

one:cx embeds AI services directly into automated workflows and analysis processes, eliminating bottlenecks in test implementation, evaluation, and documentation. AI agents derive test specifications from requirements, implement test cases at the push of a button, cluster and prioritize failure and error patterns, and detect flaky tests.

Review and analysis effort drops dramatically, while approvals stay deterministically secured through quality gates and traceability.

The result: intelligent testing, data-driven decisions, and safer releases.

from fast
to smart

- **AI agents** – test specifications, test scripts, and analyses in minutes instead of hours
- Intelligent **defect analysis** – review effort drops dramatically
- Deterministic approvals – **AI accelerates**, humans decide
- Data-Driven decisions – **consolidated** and traceable
- AI at the core – not bolted on, but **native** to every workflow

Intelligent test execution

one:cx makes test results visible fast by fully automating test execution. Intelligent scheduling detects test tasks automatically, distributes them in parallel across properly configured systems, and runs them. Teams always keep full control over what runs, when, and on which resources.

System data is captured continuously and streamed in real time – so no resource sits idle or stuck in an error state.

effortless
at scale

- Intelligent scheduling – automatic assignment to the optimal test resources
- Maximum **resource utilization** – real-time monitoring for peak efficiency
- Parallel **test execution** – more results in less time
- Event-driven **Workflows** – automated and modular
- **Shift-Left & Virtualization** – catch bugs earlier

Testing that **accelerates**

one:cx automates testing and the entire integration process. The platform eliminates organizational bottlenecks across project boundaries, automates complex workflows, and aggregates test results, logs, and artifacts from every test environment.

Everyone involved gets the right feedback for their role – automated, context-aware, and without any manual effort.

not slows
down

- **End-to-End test chain** – from the first commit to release
- Comprehensive **monitoring** – with fast, actionable feedback
- Process reliability – through fully automated workflows
- Automated test reviews – for data-driven decisions
- **AI integration** – for faster processes
- **Workflow automation** – without manual handoffs
- Full **test orchestration** and staging automation

Innovation has **no borders**

Software isn't built and tested in one place anymore. Teams, data, and projects are distributed across the globe. Only those who connect everything seamlessly can stay agile, multiply knowledge, and unlock real innovation.

one:cx is the central control panel that makes this possible – orchestrating every test pipeline, breaking down silos, and accelerating results. It brings teams together as if they were sitting at the same table. No matter where they actually are.

neither does
collaboration

- Cross-functional **collaboration**
- **Reusable** test assets across teams and development stages
- Continuous **feedback** on every change
- Agile **DevOps practices** instead of waterfall development
- Efficient **workflows** with seamless Jira integration
- Full **transparency** for every team
- Centralized **management** of roles, permissions, and artifacts

Cloud-native by Design

one:cx brings software testing together with modern cloud infrastructure, creating a consolidated full-stack ecosystem of cloud resources, DevOps pipelines, and data analytics – on-premise or in the customer's cloud.

This reduces integration complexity and accelerates iteration cycles. On-demand scaling spins up test instances in seconds – whether for a single unit test or a full-scale regression run. Unused resources scale back down automatically, keeping operational costs under control.

scaling
without
limits

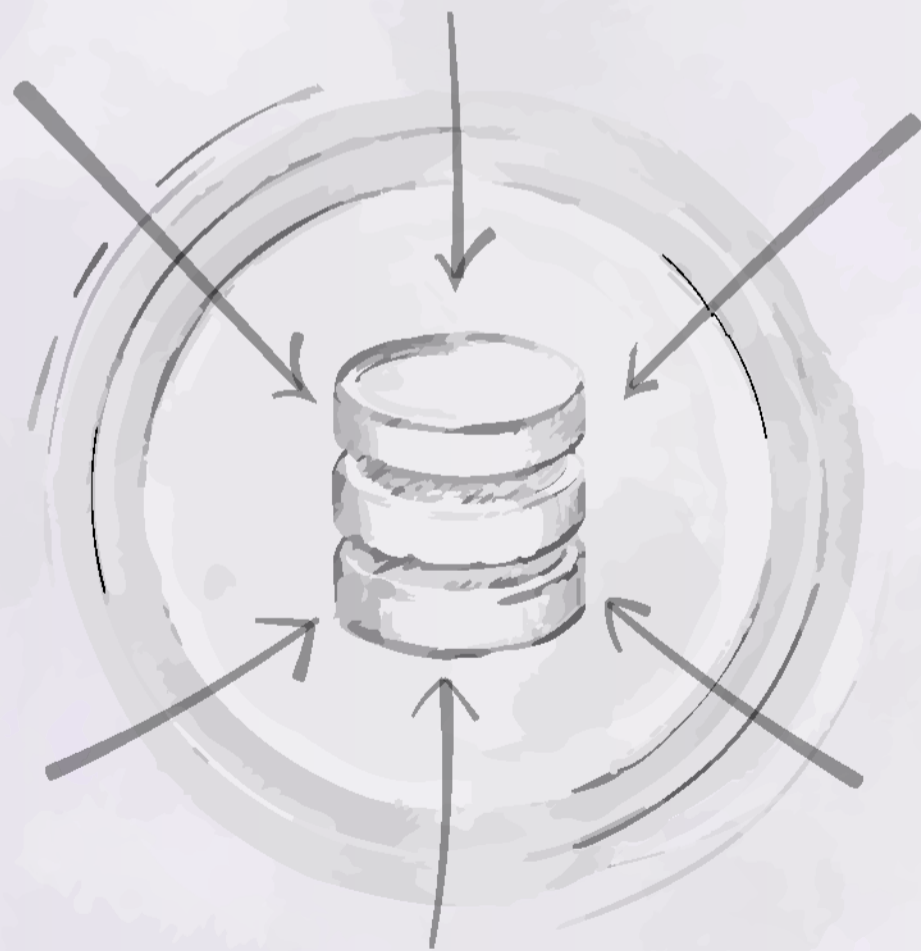

- On-demand test resource **scaling**
- **Sustainable** by design through efficient use of test resources
- Flexible **global** access – anytime, anywhere, around the clock
- Enterprise-grade security – data encryption, compliance, and **security standards**
- **Easy CI/CD integration** into existing pipelines
- **Built-in reliability** – automated backups, redundant storage, high availability

Data that **drives**

one:cx orchestrates every integration and testing process, consolidating results and artifacts in a central data hub. Silos disappear, and consistent information becomes available across the board: test results, configurations, requirements from ALM systems, software builds, versions, and more.

The platform creates a trusted data foundation, delivers the governance structure you need, and enables full traceability for everyone involved.

- Central, interactive **dashboards** – real-time insights at your fingertips
- Single Source of Truth – centralized, consistent **data management**
- Cross-domain **traceability** – end-to-end transparency
- AI- und ML-powered Analytics – faster decisions, with confidence
- **Hub multiplier effect** – compounding efficiency across the entire process
- Simplified IT – **one system** to manage, not many

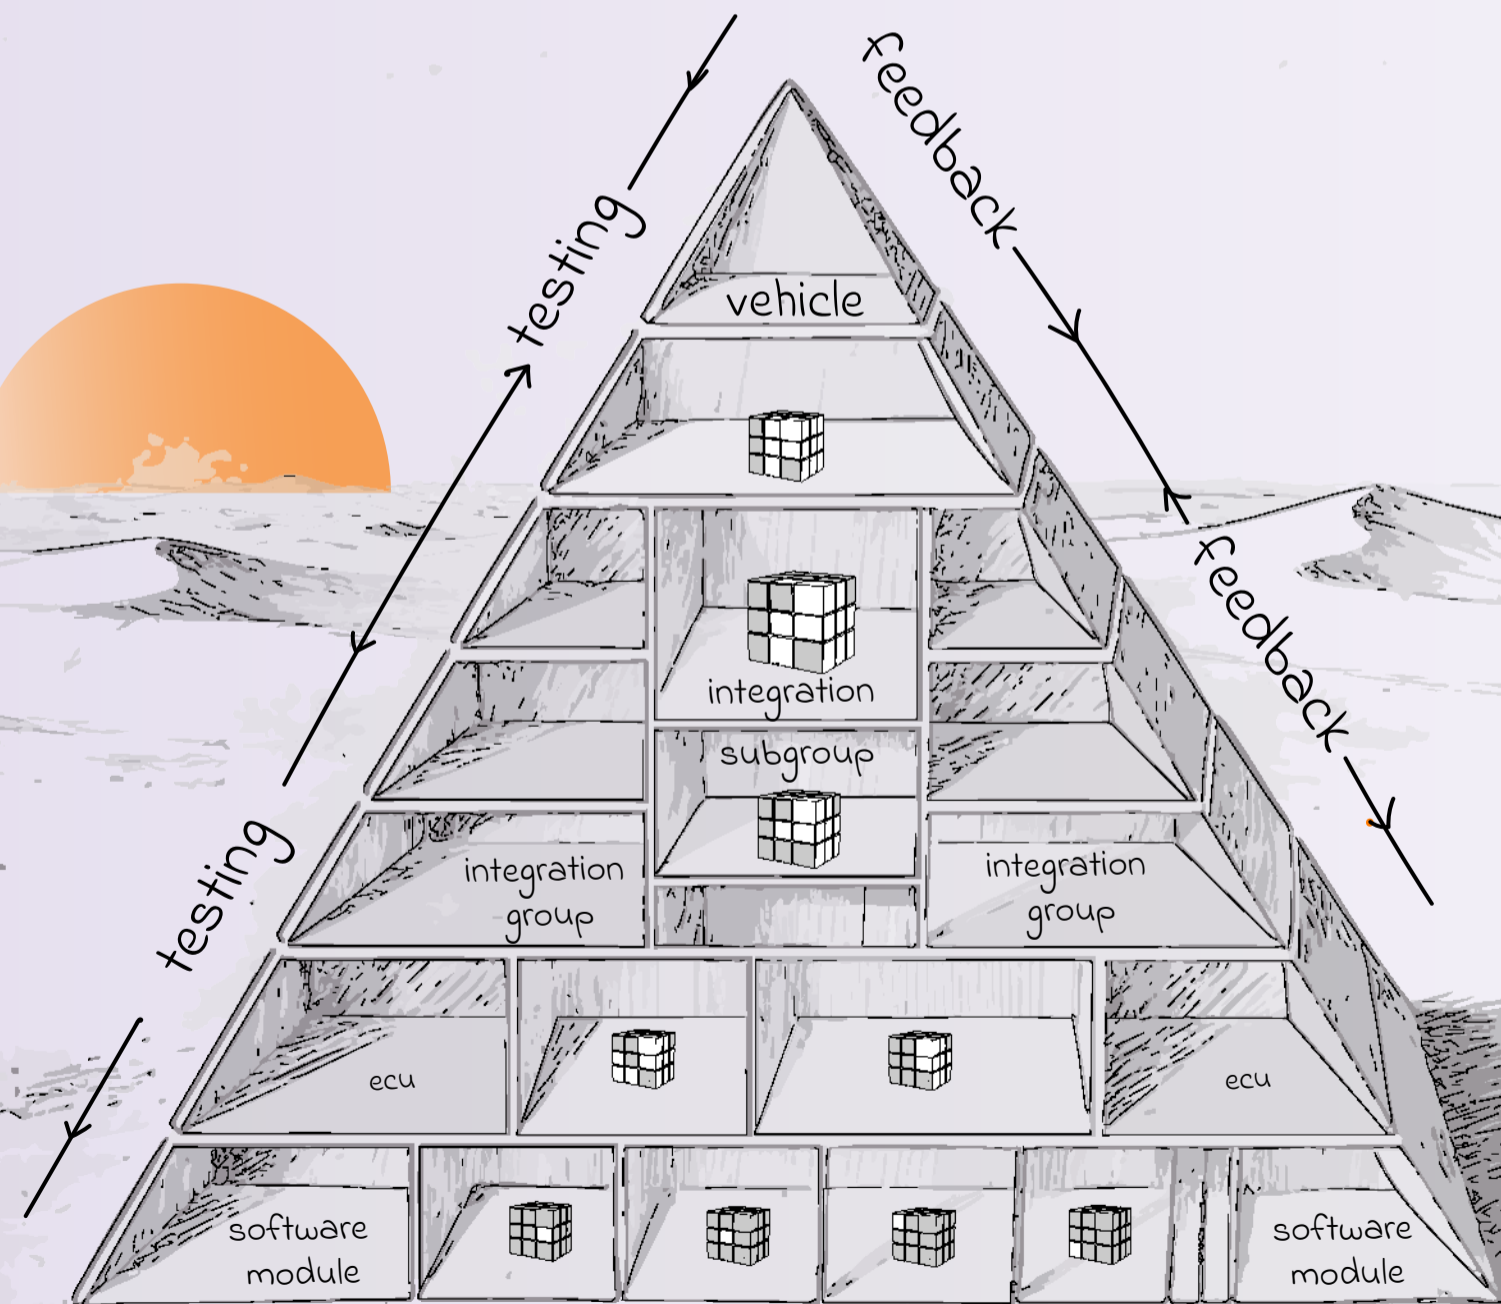

Seamless integration

one:cx drives stage-spanning workflows that continuously integrate and test software artifacts – from the first line of code to release. Virtualized test processes eliminate resource bottlenecks and enable parallelized software testing with zero manual effort. Quality Gates prevent faulty software builds from reaching the next integration stage.

The result: shorter integration cycles, higher artifact quality, and complete clarity on release readiness at every moment.

From first
commit to
release

- Continuous Integration & Delivery
- Automated Quality Gates
- Automated software promotion
- Compliance-ready releases
- Real-time release readiness

Feels like **progress**

one:cx orchestrates and automates the entire journey from the first line of code to a confident release – powered by AI, cloud technology, and data-driven analytics.

not like
risk

Ten **reasons** to choose

- Feedback shrinks from weeks to hours – through CI/CT, **intelligent filters**, and role-based reports – all automated.
- Critical bugs surface early – **real-time feedback**, shift-left testing, and statistical analysis catch issues in the earliest development stages.
- Shorter test cycles **boost release frequency** – through targeted test planning, less redundancy, and automated orchestration.
- Reviews get radically simpler – **central dashboards**, automated defect clustering, and AI support lead directly to root causes.
- Tool silos and data handoffs disappear – seamless toolchains and cross-system automation deliver **smooth end-to-end processes**.

- Routine work drops dramatically – AI services, test libraries, and specialized workflows free up teams and **create room** for what matters.
- Cross-disciplinary collaboration becomes easy – a **central data hub** delivers one unified view and full transparency.
- Test preparation takes minutes, not days – automated test bench setups and **one-click execution** cut prep time by up to 95%.
- Releases become noticeably more stable – real-time dashboards, consistent KPIs, and **end-to-end traceability** enable confident release decisions.
- Testing runs at **peak efficiency** – CI/CT pipelines trigger setups, executions, and processes across every integration stage, fully automated.

Expertise that builds trust

one:cx is built on more than two decades of experience, during which we've mastered the most complex software projects together with our customers.

As a hybrid platform for on-premise and cloud, **one:cx** connects existing toolchains, consolidates test results into a unified evidence base, and automates complex development and integration processes – seamlessly, traceably, at scale.

Test cycles in minutes instead of hours. Analyses in hours instead of days. Approvals in days instead of weeks. The time teams gain, they invest in the next wave of innovation. Complexity doesn't disappear – but with **one:cx**, it becomes manageable.

for over 20
years

one:cx – powered by **tracetrionic**

- **400+ customers** in 30+ countries – from OEMs to regulated industries
- **500+ specialists** worldwide – with locations across Europe, the US, and Asia
- **Long-standing** customer relationships – many have been with us from the very beginning
- Grown from **real-world practice** – built with customers, not on paper
- Proven product family – **one:cx** builds on established solutions

Let's think bigger - together
