

We are **tracetrionic**.

We thrive where software development gets complex. Turning fragmented toolchains into one connected, automated flow – from the first line of code to the final release. This way, your brightest minds can focus on innovation instead of repetitive manual work. Built to last, easy to scale, and reliable down to the smallest detail.

Integration Debt in the SDV – AI and Orchestration Accelerate SDV Implementation

Developing Software-Defined Vehicles means keeping pace with rapidly growing complexity. Fragmented tools, siloed data, and manual reviews slow down integration and put release timelines at risk. one:cx, tracetrionic cloud-native platform, gives OEMs a single, connected foundation – orchestrating integration and validation processes across all test environments. AI-powered analytics and automated quality gates enable faster, data-driven release decisions resulting in less integration overhead, better software quality, and a shorter time to market.

matters?

Whatever you choose,
we'll pave the way.

Meet our agentic testing tools

TEST SPECIFICATION

From requirements to structured specifications

Gain more coverage confidence with less manual effort.

DATA ANALYTICS

From question to customized dashboard

Turning test result data into actionable insights.

TEST AUTHORIZING

From specifications to executable test case

Speed up test implementation with higher consistency.

one:cx
test intelligence

REVIEW TOOLBOX

From test results to release confidence

Uncover error patterns to support release decisions.

INFOTAINMENT/UI TESTING

From brittle scripts to intention-driven tests

Stays robust through constant UI changes.

AGENTIC WORKFLOW

From fragmented processes to governed AI pipelines

Orchestrate testing and integration end-to-end.

The future of Software Development

Why choose one:cx?

- **Shorter time-to-market** - from weeks to days
- **75% less time** spent on reviews
- **Up to 15x faster failure detection** via intelligent analytics
- **Agentic testing** - up to 80 % less manual effort
- **Data-driven decisions**
- **Real-time feedback**

Progress. No friction. **Decisions.** No Delays. **Innovation.** No borders.
Integration. No breaks. **Scale.** No Limits. **Collaboration.** No Silos.
Testing. No bottlenecks. **AI.** No guesswork. **Releases.** No surprises.
